

## **Diacerein**

Diacerein is distinct from all other painkillers & joints treatments due to its ability to reduce joint inflammation and pain, without having negative side effects on the stomach, blood pressure or heart.

Diacerein inhibits the production of 'Interleukin – 1 beta', the protein in the human body which causes osteoarthritis and joint inflammation.

### ***Dosage***

Consult your doctor for a personalized dosage instruction. In general, patients will be advised to take one capsule, twice daily for a period from one to six months. In patients with severe impaired functions it is recommended to halve this dosage.
