

Tinox

Tinox is a topical cream that completely eliminates Athlete's foot. Athlete's foot (Latin: TineaPedis) are fungi that infect the skin, appearing in the form of painful patches between the feet and causing a particularly bad smell. 26% of the world's population has suffered from Athlete's foot at one time or another, making it the most common skin infection. Bad ventilation for the feet, sweatiness, walking bare feet in public spaces and warm and humid environments all contribute to putting your feet at risk for Athlete's foot.

Tinox works through the active ingredient of Oxiconazole, a potent substance that works immediately upon application. Eva Pharma's Tinox cream is the only product in Egypt that includes Oxiconazole, making it the country's primary medication against Athlete's foot.

Treatment

Apply Tinox on the infected area once to twice a day. Continue to do this for one month
