

Tritospot cream

For removal of hyper pigmentation skin spots

Contains the four substances that have an effective impact to remove the dark skin patches:

1. Hydroquinone: helps in skin bleaching
2. Tretinoin: improves the clinical manifestation of the damaged skin
3. Hydrocortisone: helps to improve results and reduce the incidence of inflammation
4. Eusolex: protects from the sun (sun screen) to reduce the chances of re-formation of the spots again

Indications:

Tritospot cream used to lighten the dark spots of skin caused by

- Melasma
- Freckles
- Dark spots resulting from inflammation or burns
- Frequent use of make-up or perfume on the face

How to use:

Placed a thin layer once daily (on the evening) on the dark spot.

Factors that affect the melanin and lead to change the color of the skin:

1. Strong and direct exposure to the sun
2. Eczema and skin infections
3. Exposure to radiation emanating from TV sets and computer
4. Certain smells and perfumes and cosmetics
5. Some types of medicines
6. Increased hormone secretions
7. Pregnancy
8. Women who use contraceptive pills
9. Age (aging)

Some types of hyper pigmentation spots;

1. Freckles:

inherited birthmarks that appear, often, on the face, chest, neck and limbs, and is brown in color between light and dark.

2. Melasma or chloasma:

has a distinctive distribution on the face, which affects the cheeks and temple, nose and mustache

It appears in women with pregnancy and increases in the following times, or because of the use of certain types of contraceptives may also appear in some women because of the use of make-up or perfume on the face or the large number of direct exposure to the sun for long periods

3. Dark spots that appear on your knees and elbows and sensitive areas in general.

This pigmentation occurs because of the nature of these vulnerable areas always come into contact with something else or between the skin and each others or because of pressure on the skin, occurs an accumulation of layers of dead skin, which appears dark in color

Treatment:

Treatment depends first to avoid the main causes leading to a dark spots, such as reduced exposure to the sun; stop the use of topical medication irritating to the skin, beside you should use topical treatment
